SWE312

PHASE 3

Salem Bamukhier - Hashim Alghamdi - Salman Alghamdi - Haitham Alsaeed

DHAHRAN HEALTH CLINIC | PROTOTYPE SCREENS

Guidelines:

1- Limiting the number of fonts and colors used to no more than 4.
2- Splitting the complicated forms into smaller sections.
3- Drop down menus were used to minimize errors.
4- The logo was designed to stand out without using obvious symbols
5- The color used should be easy-to-read for most users.
6- Making the UI more aesthetically pleasing makes the system more usable.
7- Making the UI less complex makes the learning time shorter for the system.
8- By following Jakob's law making the system look similar to other systems will make it easier to use.
9- By following the law of uniform connectedness elements are perceived as one group of related elements.
10- By following Miller's law we made screens contain not more than 7 elements to minimize memory load on the user.

Framework:

We used justinmind as software version 8.7.5.

Notes:

Use google chorme for opening the index.html file to test the prototype.
The mobile screens were designed for iphone X.
